Digest June 2013

This monthly newsletter highlights Cohesive Strategy news, events, and regional happenings to collaborators and members of the wildland fire community, regionally and nationally.

NIFC Fire Season Preview for Secretaries Vilsack & Jewell

As another difficult fire season dawns, the National Interagency Fire Center briefs the Secretaries of Agriculture and the Interior on sharing and prepositioning resources to optimize fire management.

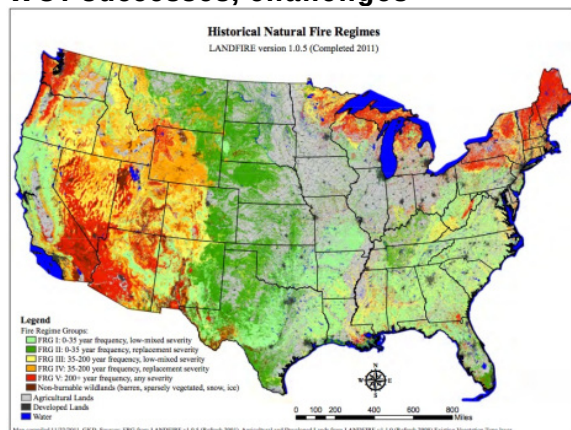

Fire Mitigation Research Needed

Roughly, 70,000 American communities face wildland fire risk. According to the National Institute of Standards and Technology, when suppression will not work Wildland Urban Interface residents can still mitigate, but more research is needed. [Read more](#)

Community at the Edge: WUI Research Compendium

Wildland Urban Interface residents are taking risk-reducing actions. Deciding to mitigate risk depends on perceived effectiveness, ability to implement, and tradeoffs with other values. [Read more](#)
